

Multify v0.1 — User Guide

Capture context. Speak naturally. Build better prompts.

Multify is a lightweight macOS overlay that helps developers turn **spoken reasoning + screenshots** into **clean, ordered, agent-ready prompts**.

What Is Multify?

Multify runs as a **floating toolbar** on your screen while you work.

It listens to what you say, watches for screenshots you take, and turns everything into a **structured prompt** you can paste into Copilot, ChatGPT, Claude, or any coding agent.

Think of it as:

Context capture (Multify) → Context reasoning (LLMs)

Installation (macOS)

1. Download Multify-v0.1-macOS.zip
2. Unzip the file
3. Drag Multify.app into your Applications folder
4. First launch:
 - Right-click Multify.app
 - Click Open
 - Click Open again when prompted

This is normal for unsigned macOS apps.

Required Permissions (Important)

On first use, macOS will ask for permissions.

Microphone Access

Used to capture your spoken reasoning.

Allow access when prompted.

Screen Recording

Used to detect screenshots you take.

Go to:

System Settings → Privacy & Security → Screen Recording

Enable Multify, then restart the app.

The Multify Toolbar

Multify appears as a **floating overlay** on your screen.

Toolbar Buttons (Left → Right)

Record

Start capturing your session.

Stop

Stop recording and begin processing.

Copy Prompt

Copies the structured prompt to your clipboard (text only).

Files

Shows the screenshots captured during this session (for manual drag & drop).

Reset

Clears the session and starts fresh.

How to Use Multify (Typical Flow)

Start Recording

Click  **Record**

Multify immediately starts listening — no delay, no missed context.

Work Naturally

- Take screenshots →  + ⌘ + 4
- Explain what's wrong, what you want changed, or what you're exploring

You don't need to be precise. Multify handles ordering for you.

Stop Recording

Click  **Stop**

Multify:

- Transcribes your audio
- Orders screenshots + reasoning
- Builds a structured prompt

This may take a second or two, wait until the “export to clipboard” button becomes available.

Copy the Prompt

Click  **Copy Prompt**

- ✓ Only **text** is copied
- ✓ No images are embedded
- ✓ Agent-ready structure

Paste it into:

- GitHub Copilot Chat
- ChatGPT
- Cursor
- Any LLM agent ...

Attach Screenshots (Optional)

If your agent supports images:

- Click  **Files**
- Drag screenshots directly into the chat

Example Output (What You Paste)

STEP 1

Screenshot: main-page.png

Instruction:

Reduce the title font size by 50% and improve spacing above it.

STEP 2

Screenshot: content-section.png

Instruction:

The yellow outline feels overwhelming. Improve contrast and margins.

Keyboard Shortcuts (macOS)

- **Quit Multify:** ⌘ + Q
 - **Hide Multify:** ⌘ + H
 - **Force Quit (if needed):** ⌘ + ⌘ + Esc
-

How to Exit Multify

Multify runs as a background app.

To fully exit:

- Press ⌘ + Q
 - Or right-click the Multify icon in the Dock → **Quit**
-

⚠ Known v0.1 Notes

- Multify does **not** auto-attach images to prompts
- Screenshots must be attached manually (by design)
- macOS may log audio warnings — these are harmless
- This is an early release focused on correctness and clarity

Who Is Multify For?

- Full-stack developers
- UI / UX debugging workflows
- Agentic coding users
- Anyone tired of writing long prompts manually

Multify Philosophy

**Multify captures context.
LLMs reason about it.**

Feedback & Updates

This is **v0.1** — your feedback shapes what comes next.

More coming soon:

- Prompt templates
- Hotkeys
- Better agent integrations
- Signed & notarized builds

Happy building!
